S2 Writing competition

Champion

2A (31) Gordon Tse

In the 30th century, NASA sent two astronauts to space- Mathew and Chole. This was their first mission on space- repair the system of space station.

When they were flying to the space station, the engine shut down and exploded. The control board began to run out of control. But, one UFO came upward to the spaceship and sent an alien to their spaceship to help them to restart the control system and fixed the engine when they almost restarted the system of spaceship, a group of space rubbish rushed to them. The two astronauts were put out to space. They couldn't connect anymore. The oxygen continued to decrease while the time past. So Mathew put Chole to the USA station, but when Chole reached the space station, it had almost been destroyed by space rubbish. She got in the last spaceship and flew to China space station for a module to return to the Earth.

Luckily, China space station was still there. So, she got in the module successfully and was ready to return. When her module reached the earth's atmosphere, the heat shield was ablated by air resistance. The control system was shut down by the heat. So, she still could return to NASA to report this desolate trip.
