

Dear Editor,

I am writing to express my opinion on the issue of saving the environment.

First of all, we can start a green life at school. At school, in summer, we will turn on the air-conditioners. If we turn on the air-conditioners, we should turn the temperature to 25°C or if not too hot, we should turn on the fan to save the electricity. Next, the school will provide the A4 paper but if we can, we can reuse the used paper to do another functions, like draft work. Then there are lots of spaces in school. We can plant a lot of trees to make the school's air cleaner. It's called plantation. Besides, the school can hold activities to promote "Go Green" to save the earth. Finally, I suggest the food supplier to design a good lunch box to make less leftover.

Besides, we can also do something in our daily lives. First, we can use our own shopping bag for shopping. We should take more public transportation, such as MTR, minibus, bus, taxi, etc. After that, we have a lot of household waste at home. We can sort the rubbish to the recycling bin, for example: 4R. Now we have the clothing collection company or CD collection bin. It is very convenient! Also, we should not use the disposable eating utensils, not to increase the solid waste. Then, for electrical appliances, when we are not at home, we should turn off the light and we can change the light bulbs to energy-saving bulbs.

Last, I am really frustrated when I see the huge waste produced every day. Let's work in hand and make a better future! Start going green from our daily lives.

Yours faithfully,
Andrea
