

Dear Editor,

I am writing to express my opinion on the issue of starting a green life to save our environment.

First of all, we should start a green life at school. For example, before we leave our classroom, we should turn off the lights and air-conditioners. Also, teachers and students should use both sides of paper before we put them into the recycling bins. Moreover, we can organize the activities to promote “Go Green” in order to encourage students to do more for the environment.

Apart from school, we can also make our green life in our daily lives, such as eating with our own tableware but not disposable ones which are made of polystyrene. They are not environmental. Then, we should ride public transport to keep the air fresh. Also, we can plant some plants at home like flowers or cactus and the other kinds. Also, you can buy electrical appliances with Energy Label.

As we can see, the pollution problem is very serious. If we don't do anything, the earth will die. So, we must act now or we will regret very soon. Help the earth, save your life.

Yours faithfully,
Nicole Yiu
